A Guide to Community-Based Workforce Principles for Contact Tracing

A guide to help states and local leaders advance urgent health equity priorities as part of COVID-19 response and recovery efforts

Updated May 19, 2020
This guide accompanies a set of recently released community-based workforce principles

Visit bit.ly/Pr1nc1ple to view and individually endorse these community-based workforce principles.

Restore Hope & Health: Community-Based Workforce Principles for Contact Tracing Efforts

Dear state and local leaders,

We, the undersigned, write in support of the principles described below, which outline ways to help contain COVID-19, advance equity, and ensure safer, healthier, and more resilient communities.

Community-Based Workforce Principles.

› Draft Roadmap & Monitoring Tool
Health equity priorities
As national calls for a surge in contact tracing grow...

We support and applaud emerging Congressional proposals and private sector calls for a surge in contact tracing efforts.

**Pandemic Response and Opportunity Through National Service Act**
U.S. Sens. Coons, Reed, Klobuchar, Duckworth, Heinrich, Markey, Van Hollen, Blumenthal, and Durbin
- 750,000 national service positions
- Includes surge capacity for up to 300,000 public health workers

**Bipartisan Public Health Leaders Letter on COVID19 Tracking and Tracing**
- Expand contact tracing workforce to 180,000
- Calls for $12 billion

**“Health Force”**
U.S. Sens. Gillibrand & Bennett
- Conduct contact tracing; administer COVID-19 tests; & provide COVID-19 vaccinations (when available);
- Share COVID-19 public health messages with community members
- Provide data entry for epidemiological surveillance;
- Provide community-based and home-based services, including food and medical supply delivery to elderly and immunocompromised individuals;
- Provide palliative and hospice care;
- Provide other public health-related services, as needed.

**ASTHO/ NG A Roadmap to Recovery**
- At least 100,000 workers
- Calls for $3.6 billion in emergency Congressional funding
- Encourages states to include community health workers (CHWs)
States are starting to scale their own contact tracing workforce

Estimates of how many contact tracers are needed range from 100,000 to 300,000.

- Based on data from 44 states and the District of Columbia, states reported having at least 11,142 contact tracers working now (NPR)

- State command centers and departments of health are actively developing plans to scale contact tracing

Based on NACCHO estimates of 30 workers per 100,000 needed during the COVID-19 pandemic

States Nearly Doubled Plans For Contact Tracers Since NPR Surveyed Them 10 Days Ago.
Meanwhile, like many infectious diseases, COVID-19 is exploiting economic inequity

- “Those who are at highest risk for infection are those who cannot easily shelter in place due to job loss, furloughs, or because they are providing essential services”

- The majority of those who tested positive (82%) reported having been financially affected by economic fallout of the pandemic. (UCSF)

And the legacy of structural racism is shaping how COVID-19 spreads

Based on state and county health department COVID-19 case data through 4/20/20:

• Infection rates were five times higher in majority-minority ZIP codes than in ZIP codes with less than 10% nonwhite population.

• In the poorest neighborhoods, the COVID-19 infection rate was twice as high as in the nation’s wealthiest ZIP codes. (USA Today)
Urgent health equity priorities

Amid the COVID pandemic, state command centers are mobilizing rapid response capabilities and, increasingly, looking for ways to protect and restore health and economic opportunity.

This is especially true for black, Latinx, immigrant and low-income communities, which face disproportionate risks due to structural racism, economic inequality, and health inequity.

To restore health and economic opportunity, especially among populations at disproportionate risk of COVID-19 and its fallout, there are three urgent health equity priorities:
1. Urgently expand testing and contact tracing to decrease community transmission & identify psychosocial needs
2. Scale up psychological first aid, social supports, & primary care services
3. Mitigate the economic and health fallout of rising unemployment

For minority, low-income communities & other vulnerable populations

Expand contact tracing & identify risks
Support psychological, social & primary care services
Mitigate the impact of unemployment
What happens if evolving contact tracing strategies are not embedded in communities?

Risk
Rapidly evolving state and local contact tracing and public health response efforts may fail to include clear strategies and mechanisms to advance urgent health equity priorities for disproportionately impacted and vulnerable communities.

Adverse impacts
- Low community engagement
- Less effective contact tracing
- Preventable spikes and persistence of COVID-19 community transmission
- Increased strain on state budgets
- Worsening health and economic disparities
- Deepening of structural racism and economic inequity

Solution
To increase the odds of success, states and local leaders should adopt and apply community-based workforce principles in the next phases of contact tracing strategies.
Who is part of a trusted “community-based workforce”? 

Trained community-based professionals:

- Community health workers
- Promotores
- Community-based, nongovernmental nonprofit staff and human services providers
- Other trusted community-based professionals (e.g. peer specialists, recovery coaches, doulas)

While skills and roles vary, members of a “community-based workforce” share common experiences and traits:

- Live in and share culture, language, and life experiences with the members of the communities they serve
- Have earned and enjoy a deep level of trust with peers and neighbors
- Posses strong relational expertise and interpersonal communication skills
- Have relationships with and knowledge of local community-based resources
- Demonstrate a long-standing commitment to living and working in their communities
- Are recognized by CDC and other emergency preparedness experts as an essential component of community recovery capabilities

Note: With specialized training, lay workers or “natural helpers” who live in highly impacted communities can support and join a community-based workforce

- Unemployed residents & retirees
- Students/ recent graduates
- Lay community-based leaders (e.g faith-based leaders, barbershop owners, leaders of neighborhood mutual aid groups)
Community-Based Workforce

Principles

+ Suggested Strategies & Resources
(Updated May 18, 2020)
To scale contact tracing successfully, adopt these community-based workforce principles

**Recruit with a racial equity framework**
Apply a racial equity lens to recruit contact tracers from highly impacted communities. Pay a living wage. Include residents, trusted workers & leaders in governance & advisory groups.

**Invest in trusted workers, including CHWs**
Response & recovery will move at the speed of trust. Pay and expand the authority of trusted, trained community health workers & promotores (CHW/Ps) to support and join contact tracers.

**Launch a community-based jobs program**
Leverage existing and expected federal funds to engage unemployed or dislocated workers with living wage jobs that meet contact tracing & other community needs.

**Embed job training & pipelines to local careers**
Engage nonprofit workforce training partners to address basic skills gaps and create a pipeline to careers in local health departments, community-based organizations, and local businesses.

**Strengthen connections with psychosocial services**
Use social vulnerability data and proven tools to identify household psychosocial needs among isolated/quarantined contacts and to connect them to community nonprofit resources.

**Strengthen community infrastructure & financing**
Braid funds to sustain essential nonprofits and invest in outcomes funds, wellness trusts, and other place-based payment models that align with long-term community health outcomes.
Recruit & manage with a racial equity framework

A contact tracing workforce should reflect communities disproportionately impacted by COVID-19.

**Suggested strategies**

Include a racial & gender equity policy & adhere to national best practices in recruitment and hiring of workers from low-income, minority, and immigrant populations, including people with disabilities.

Provide a living wage and enabling supports like child care to contact tracers from highly impacted communities.

Include individuals who live and work in impacted communities in contact tracing governance & advisory groups. This includes community health workers & promotoras (CHW/Ps), nonprofit staff, community leaders, and residents with disabilities.

**Resources**

- **Hiring:**
  - National HIRE Network [Best Practice Standards](https://www.nationalhire.org)

- MIT [Living Wage Calculator](https://www.mit.edu/lwp)

- Virginia Department of Health - [Health Equity Workgroup](https://www.vdh.virginia.gov/health-equity/)
  - Established March 11, 2020. Embedded at the senior-level of the State Agency-wide Coronavirus Unified Command. Meets virtually every week to review policies and determine how vulnerable populations in the Commonwealth are (or are likely to be) impacted.)
Invest in trusted voices, including Community Health Workers

Expand the roles and ranks of CHW/Ps & other trusted community-based workers

Suggested Strategies

Expand CHW/P authority with Medicaid state plan amendments, and “essential critical worker” recognition.

Include the National Association of Community Health Workers, state networks of CHW/Ps, & other community-based workers in planning, training and support of contact tracing & response efforts.

Apply CDC and other funds (e.g. section 1115 waivers, Dislocated Worker Grants) to pay CHW/Ps & other community-based workers a living wage to support a broad range of activities, including contact tracing.

Provide LHDs & CBOs with advance payments to support CHW/P activities in highly impacted communities

Resources

- 2018 Bureau of Labor Statistics for CHWs (Suggest surge to 2x current baseline by 2022)
- National Association of Community Health Workers (NACHW) COVID-19 Resources & 3 ways to amplify CHWs
  - Department of Homeland Security Memorandum on Essential Critical Infrastructure Workers
- NGA / ASTHO Roadmap to Recovery: A Public Health Guide for Governors
  - See sections related to CHWs as well as Dislocated Worker Grants and other funding streams
- Medicaid state plan amendments
  - Penn Center for CHWs Letter to CMS
  - National Center for Healthy Housing Advancing the Role of CHWs: Engaging State Medicaid Offices
  - Families USA How States can Fund CHWs through Medicaid
- CHW Core Consensus Project (C3) Roles and Competencies & Checklist

*As trusted public health workers who live in and share culture, language, and life experiences with the members of the communities they serve, CHW/Ps leverage their training, unique skills, relational expertise, and a range of activities to improve health and build individual and community capacity.
**Strengthen connections with psychosocial services & systems**

Integrate response efforts with systems to address psychosocial needs in highly impacted communities.

**Suggested Strategies**

Use geospatial, social vulnerability, and race/ethnicity data to deploy a community-based workforce to hardest-hit and most vulnerable communities.

Integrate validated, standardized screening items in case investigation systems to identify psychosocial needs.*

Use interoperable referral platforms to connect contacts and households to community resources.

Engage CHW/Ps & other community-based professionals to provide ongoing psychosocial support & care coordination for high & rising risk populations.

**Resources**

- Data on community-level social vulnerability
  - State and county DPH data
  - CDC’s Social Vulnerability Index (SVI)
  - Geocoded, risk-stratified data from claims databases, EHRs, & HIEs

- Geospatial software: ESRI, MySidewalk

- Social Needs Screening Tools:
  - CMS Accountable Health Communities Screening Tool
  - UCSF SIREN Social Needs Screening Tools Comparison Table

- Community resource databases & referral platforms (e.g. 211, AuntBertha) & community information exchanges (e.g. UniteUs, San Diego CIE)

*Work with vendors of case investigation / management software to integrate psychosocial needs. With training, Contact Tracers and/or Resource Coordinators can then screen contacts for household acute psychosocial needs using validated screening items. In addition to counseling contacts on quarantine and referring them for COVID-19 testing, refer people with identified psychosocial needs to Resource Coordinators (ideally trained CHW/Ps). They, in turn, use community resource & referral platforms to support households.*
Launch a community-based jobs program as a force multiplier

Boost response & recovery with a jobs program for unemployed workers from highly impacted communities.

Suggested Strategies

Leverage federal funds and national and state-based service programs to deploy a community-based jobs program.

Develop a state interagency plan (i.e. public health, workforce development, education) to launch a jobs program to support contact tracing, other response efforts, and long-term community recovery activities.

Recruit and pay unemployed, dislocated and other struggling workers from highly impacted communities with living wage jobs that meet contact tracing & other community needs.

Resources

Leverage private foundation and corporate giving, as well as national service programs (which Congress is currently considering expanding). National Dislocated Worker Grants from the Department of Labor, and other federal disaster relief funds.

- National service programs
  - Corporation for National & Community Service (AmeriCorps, Senior Corps)
  - HHS (National Health Service Corps, Medical Reserve Corps)
  - CDC (Funding workers to support state health departments)

- Congressional proposals
  - "Health Force" Bill (U.S. Sens. Gillibrand & Bennett)
  - Pandemic Response and Opportunity Through National Service Act (U.S. Sens. Coons, Reed, Klobuchar, Duckworth, Heinrich, Markey, Van Hollen, Blumenthal, and Durbin)
 Embed job training & pipelines to local careers

Provide job training to improve opportunities for long-term health and economic recovery.

**Suggested Strategies**

Use state and federal workforce development funds and programs to provide job and skills training to support contact tracers and other individuals in community-based jobs programs.

Include nonprofit workforce training partners, CBOs and community colleges to address basic skills gaps and prioritize training of individuals from disadvantaged communities and those facing barriers to employment.

Create a pipeline to local careers in local health departments and community-based organizations.

**Resources**

- National Dislocated Worker Grants from the Department of Labor
- National nonprofit workforce training and development partners
  - LISC Bridges to Careers Opportunities
- State health workforce development agencies
- State and local workforce training and career development nonprofits
- Community colleges
- PolicyLInk: Building an Inclusive Health Workforce in California
**Strengthen community infrastructure & financing**

Align incentives and invest in local infrastructure for long-term health and community development

**Suggested Strategies**

Support federal and state action to fund and preserve community nonprofits & mission-driven financial institutions that serve highly impacted communities and vulnerable populations.

Pay essential nonprofits in highly impacted communities per contracts even if operations are affected. Preemptively convert funding to unrestricted funds during the response phase.

Braid funds and invest in wellness trusts, outcomes funds & other place-based financing models that are aligned with achieving long-term health outcomes in historically redlined and marginalized communities.

Community-based workforce

Monitoring Tools and Roadmap
General resources

- Monitoring Tool for Community-Based Workforce Principles in States Contact Tracing efforts (HealthBegins)
- Contact tracing workforce estimator (Mullan Institute for Health Workforce Equity)
- Contact Tracing Staffing Calculator (Resolve to Save Lives)
- A Coordinated, National Approach to Scaling Public Health Capacity for Contact Tracing and Disease Investigation (ASTHO)
Next steps to align initial contact tracing strategies with a community-based workforce

1. Set recruitment targets
To ensure the workforce is representative of local communities, generate recruitment targets specifying number of staff needed by county. Coordinate recruitment and hiring in collaboration with local public health.

2. Map recruitment partners
To get to scale, contact tracers will need to be recruited from a diverse pool of community-based partners. Identify and assess capacity of state and national recruitment partners. Form or grow health equity workgroup.

3. Grow state program office*
Build capacity of state program office to coordinate with community leaders and providers of technical assistance, training, and technology to support a community-based workforce.

4. Apply principles
Coordinate with state program office, state and county hiring bodies, partners (recruitment, technical assistance and technology), health equity workgroup to endorse and adopt community-based workforce principles.

5. Coordinate hiring & training
Work with state and local health departments and partners to inform and align planning and hiring & training practices with community-based workforce principles. Apply continuous quality improvement.

What are the main job types? How many contact tracing and other positions need to be filled? What are skill level and attrition rate assumptions?

What is the capacity of state community-based workforce partners? What number and mix of CHW/Ps, unemployed, students / recent graduates, and service corps members can be recruited?

How will community voices be included? Which technical partners can ensure community-based workforce principles are integrated in workflows and data systems?

How will we ensure that community-based workforce principles are adopted? What dashboard and measures can we use to track progress?

How is hiring and training going? Are the most vulnerable populations and high-need communities receiving effective tracing and support? How can we improve?

*Contact Tracing State Program Office roles (adapted from California Health Care Foundation)
- Local/state health department technical assistance and capacity building
- Standard operating procedures
- Recruitment and staffing supports (e.g., guidelines, qualifications, supervision structures)
- Training (curriculum, online training platform)
- Identification and deployment of supportive technology and ensure data integration
- Legal/privacy (establish guidelines and guardrails, surface issues)
- Program evaluation and continuous quality improvement (e.g., via statewide dashboard)
A roadmap to accelerating contact tracing with a community-based workforce (Illustrative. Will vary by state)

State DPH Contact Tracing Workforce Strategy

- **Recruit & manage with a racial equity lens**
- **Connect with psychosocial services**
- **Invest in and include trusted community workers**
- **Launch a community-based jobs corps**
- **Embed job training & pipelines to local careers**
- **Strengthen community infrastructure & financing**
Appendix:

Why do we need a community-based workforce?
Community-based workforce strategies are emerging

HealthBegins is working with a growing group of allies and leading organizations to elevate and advance community-based workforce principles and strategies.

“Now more than ever, we need to support our clinical and public health response by swiftly launching forward-looking, community-level strategies. That starts with a community-based workforce.” (Health Affairs Blog, May 9, 2020)
State workforce scaling strategies in response to COVID-19

Health care workforce

- Expand scope of practice
- Telehealth
- Medical Reserve Corps
- Deploy students/advance graduation

Emergency, tertiary & primary care (governmental & nongovernmental)
## State workforce scaling strategies in response to COVID-19

</tbody>
</table>
A community-based workforce can advance equity & accelerate response efforts

1. Recruit & manage with a racial equity lens
2. Invest in trusted workers, including Community Health Workers & Promotores
3. Connect with psychosocial services
4. Launch a community-based jobs program
5. Embed job training & pipelines to local careers
6. Strengthen community infrastructure & financing

Health care workforce
- Emergency, tertiary & primary care

Community-based Workforce
- Psychosocial services, navigation, resilience & advocacy

Public Health Workforce
- Surveillance, emergency response & prevention

- Expand scope of practice
- Emergency licensing of volunteer health practitioners
- Activate Medical Reserve Corps & National Guard
- Deploy students/advance graduation
- CA DPH new contact tracing initiative
- CARES Public Health and Social Services Emergency Fund (PHSSEF)
- Emergency disaster response funds for state/local public health departments
- CDC COVID-19 Corps
A community-based workforce is critical to equity-based crisis response

**Community-based Workforce Roles**

- Address emerging psychological, social & primary care needs
- Expand contact tracing & identify household psychosocial risks
- Mitigate socioeconomic impact of massive unemployment

**International consensus, the CDC, & the US Community Preventive Services Task Force** recognize that nonprofit community-based organizations, community health workers, and local volunteers are critical to supporting vulnerable populations at every stage of disaster response.
About HealthBegins

An independent, national mission-driven consulting and training firm dedicated to improving care and social drivers of health and equity.

We help partners & communities move upstream to:

• Design bold strategies
• Drive major improvement
• Transform systems & structures

Using an equity lens and working closely with allies and partners, we can provide state command centers with strategic consulting & facilitation, technical assistance, and partnership development to help integrate community-based workforce and concrete upstream strategies in contact tracing and other response efforts.

Client partners range from health systems and plans to foundations and self-insured employers.
