STATEMENT OF POLICY

Mass Incarceration and Racism

Policy
The National Association of County and City Health Officials (NACCHO) acknowledges mass incarceration as a mental and physical public health crisis, severely impacting children, families, and whole communities, especially African American and Latino communities. NACCHO encourages local health departments to support efforts to end mass incarceration and related sanctions such as loss of voting rights and ineligibility for public funds, including welfare benefits and student loans, and to ensure that those returning to their communities from prison and jails have supports in place to thrive, including access to housing and employment.

NACCHO encourages local health departments to support and educate the public about the following public policies, in collaboration with their partners:

Public Policies to End Mass Incarceration
- Support new model sentencing guidelines that reduce the length of prison terms to fit the crimes and end discriminatory practices that disproportionally sentence prisoners of color to longer terms for the same crime.
- Support revision of disproportionate sentencing laws and mandatory sentencing.
- Support the advancement of effective community-based alternatives to incarceration, including for those with mental illnesses and substance use disorders, including treatment and diversion.
- Support ending the “school-to-prison pipeline” by opposing testing policies that lead to high drop-out rates, and providing greater resources for failing schools.
- Support an end to excessive school discipline, suspension, and expulsion for minor infractions, which insert police and prison practices into school systems, especially regarding very young children.
- Support efforts to eliminate the criminalization of inconsequential or victimless behavior.
- Support policies that decriminalize minor drug offenses to reduce rates of incarceration and recidivism.
- Support an end to discriminatory policing and enforcement of laws that target communities of color.

Public Policies to Enable Successful Re-Entry of Formerly Incarcerated People into the Community
- Support reforms that advance the health of prison/jail and post-prison/jail populations.
- Promote removal of the check box on employment applications asking individuals whether they have been convicted of a crime.
• Support criminal justice agencies’ engagement in discharge planning efforts for offenders at the point of incarceration, including transitional housing and jobs.
• Support programs that provide stable housing for returning citizens and connect returning citizens to medical homes and primary care providers in their communities.
• Oppose probation policies that require reentering citizens to have stable housing and jobs to avoid jail.
• Support policies that ensure rehabilitation (e.g., protecting health, real job training, and preparation for release) is a central feature of incarceration.
• Support local, state, and national measures that remove barriers and increase access to services and benefits such as food subsidies, public housing, healthcare, and employment.
• Support the repeal of laws that deny formerly incarcerated people the right to vote and guarantee voting rights more broadly.
• Support eliminating the use of unpaid fines for low-level offenses that can lead to incarceration.

Data, Causes, and Health Consequences of Mass Incarceration
• Track the number of local residents in prison and jails, the rates of change in incarceration by race and ethnicity, and the number of family members for each resident, especially children.
• Collect data from health records of inmates and share it with public health agencies.
• Educate local leaders and the public on how mass incarceration is a public health crisis, particularly as it affects people of color and their families over the life course.
• Disseminate information on the health effects of mass incarceration on whole communities.
• Champion rehabilitation and promote community-based transformative justice.
• Develop strategies to address stigmatization of formerly incarcerated people.
• Publicize the root causes and history of mass incarceration, especially since the passage of the Voting Rights Act. This includes demonstrating with data the extraordinary increase in incarceration rates as an ongoing strategy throughout the criminal justice system to weaken the political power of communities of color.

Justification
Introduction: Scope
The unprecedented level and rate of increase in incarceration in the United States is the highest in the world, quadrupling since 1980.1-4 Although the United States has about 5% of the world’s population, 25% of the world’s inmates are in the United States.1,5-6 Seven million U.S. citizens are in federal and state prisons, jail, probation, or on parole.1,7 Approximately 2.2 million are in prisons and jails.2 “The U.S. rate of incarceration, with nearly 1 out of every 100 adults in prison or jail…is nearly 5 to 10 times higher than rates in Western Europe and other democracies.”8,9 Incarceration rates have occurred more disproportionately by race and class in the last 30 years than at any time in U.S. history.10-12 The intensifying of incarceration, in other words, has been targeted by race and class, based on discriminatory arrest practices for things like traffic offenses and marijuana use, referring African American children to the police more often than whites, and utilizing a bail system that punishes poor people. For example, most inmates suffer from poverty and have low incomes; few have full-time jobs at the time of arraignment. In addition, almost two-thirds come from households with an income below the federal poverty line. Since the 1970s, the ethno-racial proportion of prisoners has changed dramatically, from 70% white and 30% ‘others,’ to 70 percent African-American and Latino and 30% white by 2000.13
The surge in incarceration, particularly among people of color, has almost no correlation to crime rates, which have mostly declined over the last 25 years. Specifically, according to recent research, no discernible pattern of states with higher rates of increase in incarceration experience more significant declines in crime.

**Health Inequity Implications**

The public health concern with mass incarceration is related to its devastating, systematic effects on population health and well-being over a lifetime: for those imprisoned, their families, and whole communities. The devastation stems from the denial of basic resources and benefits, limits on participation in society, onset of mental disorders in prison/jail, lack of services subsequent to release, exposure to diseases from returning inmates, and from severe forms of discrimination. The Vera Institute of Justice refers to mass incarceration and its effect on health as an epidemic.

Increasing levels of mass incarceration since the early 1980s has led to a significant increase in the likelihood of health inequities among ex-prisoners, as well as their children and families. The economic and social life of many communities experience a threat to physical and mental health thereby negatively affecting the public’s health more broadly. A major national health concern, the experience in poverty stricken communities and communities of color is more severe, due to living and working conditions that make some populations more susceptible to disease and chronic illness. Even though mass incarceration affects poor white communities, effects are much more profound in African American and some Latino communities. Mass incarceration’s contribution to social exclusion, marginalization based on the greater threat of imprisonment, excessive police surveillance, and the lack of services after release from prison/jail are intergenerational and unprecedented.

Research shows that post-prison mortality skyrockets: Those being released from prison have a 12.7 times higher risk of death in the first two weeks after release than the general population. Health risks generally increase upon leaving prison, especially for chronic conditions such as infectious disease and mental illness, given negative conditions in prisons/jails and poor healthcare. Post-prison mortality from drug overdose is 129 times higher than for the general population. Excess risk of suicide also occurs within the first few weeks of leaving prison/jail; almost 50% of inmates have a diagnosable mental disorder.

**Health Consequences for Families and Children**

More than 2.7 million children have at least one parent in prison. Overall, research demonstrates that mass incarceration has led to an expanding rate of negative health outcomes and long-term trauma, starting with the reality of parental separation, particularly in communities with high rates of poverty and in communities of color. Yet incarceration concentrates poverty for children by leading to a significant decline in family income and disrupts their ability to receive a good education. Children have greater exposure to risky behavior that decrease life chances. Every aspect of their lives is affected. For example, they have higher rates of attention deficits. Children with an incarcerated parent are at increased risk for mental illness and are three times more likely to suffer depression or behavioral problems than adults. In addition, they are three times more likely to become homeless than those without incarcerated parents.
children of incarcerated mothers graduate from college. More children are at risk of illness in neighborhoods with a concentration of former prisoners. incarceration results in a significant increase in the infant mortality rate, with a higher rate of increase among African American children compared to white.\(^5\)

Having an incarcerated parent also results in learning disabilities, developmental delays, social isolation, stigma, unstable childcare arrangements, strained parenting, and reduced income.\(^1,2,3,4\) The trauma of separation itself is even more traumatic than a death or divorce.\(^6\) Its consequences have resulted in the destruction of family structures.\(^5\) Research also shows limits on educational opportunities and, more broadly, the fragmenting of whole communities.\(^3\) According to the Vera Institute of Justice, if the U.S. incarceration rate remained what it was in 1973, infant mortality rate would be 7.8 times lower than it was in 2003 and disparity between black and white infant deaths would be nearly 15% lower.\(^5\) Among children with incarcerated parents, 45% are black, 28% are white, and 21% are Latino.\(^6\)

**Community Health and Social Consequences**

More broadly, mass incarceration is socially corrosive and can devastate whole communities in some regions, creating financial instability, homelessness, income inequality, and lack of access to benefits.\(^3,4\) Residents in neighborhoods with high incarceration rates have higher levels of stress, crime, and infectious diseases, in part because their communities experience disruptions to their social and family networks. Some of these disruptions might affect community well-being in ways that are not directly detectable.\(^4\) Labor market opportunities, for example, may decline because of the difficulties formerly incarcerated people have in finding employment at a living wage. Mass incarceration exacerbates negative socio-economic conditions, creating greater urban decay.\(^3\) Many families remain fractured after decades of incarceration, resulting in an increase in single-parent families.\(^5\)

**Racism, Class, and Mass Incarceration**

Understanding the history, causes, and sustaining influences is essential for determining strategy and identifying partners to support ending mass incarceration. The contextual focus is especially critical, given the connection to structural racism rooted in public policies and practices throughout the criminal justice system since Reconstruction.\(^2,3,4,5\) Structural racism refers to the many cumulative processes and practices in the economic and political system that socially exclude groups of people, and deprive them of access to necessary resources to sustain health and well-being.\(^1\) Examples of such processes and practices that have had devastating effects include segregation in housing, education, and employment; denial of basic rights; discrimination in sentencing; stigmatization as criminals; neighborhood disinvestment; and siting of hazardous waste primarily in communities of color. Those populations which find themselves most deeply enmeshed in the prison system are also those more likely to be living in poverty and lacking political power.\(^6\)

The system of mass incarceration is also highly associated with racial and class stratification, prominent throughout the criminal justice system.\(^4,10,14,37-39\) “More African American men are imprisoned today than enslaved in 1850.”\(^40\) In addition, the “extreme disproportion, by a factor of six among men, of black-white differences in incarceration represents a level of systematic… concentration of adversities faced by minority communities… [It is] one of the biggest threats to
the production of health…”41 Most of the incarcerated represent populations experiencing economic and social disadvantage, particularly from communities of color, linking the results to questions of social and economic inequality.2,42

Disenfranchisement and Denial of Social Services
The acceleration of incarceration in the 1980s can be directly tied to the period after the Voting Rights Act and a backlash against the civil rights movement.14,35 The United States is the only country that disenfranchises formerly incarcerated people.43 Today, parallels can be found in voter ID laws, designed to suppress voting by African Americans. Over 4.5 million African American men are denied the vote—that’s one in seven black males.43-44 As a consequence, they are less likely to believe that they can influence politics and thereby become less engaged in politics and participation. Overall, ex-inmates have experienced a loss in political power.45-47 To be full members of society, ex-inmates must be able to participate effectively in community social and political life.43,48

On returning from prison/jail, hardly any social services exist or are prescribed for formerly incarcerated people.1,22,37 This loss of basic life necessities and social services essential for well-being (for about 4 to 5 million ex-inmates), disrupts lives in many ways, including less time and energy available for participation in civic and community life.49-50 Returning offenders have limited access to benefits. Equally serious is the denial of rights to Section 8 public housing, food stamps, and access to federal student loan programs.1,15,49 Many states have withdrawn or otherwise restricted rights of ex-inmates to work in a licensed profession, such as teacher, barber, or therapist, as well as restricted Medicaid reimbursement to inmates of a public institution.1,51

The Link between Mass Incarceration and Economic Restructuring
Mass incarceration correlates clearly with urban economic restructuring that has dispossessed millions since the 1980s, and with perceived threats to the economic order and racial hierarchies that have created what amounts to permanent social insecurity and inequities.10,11 While the increases in incarceration can be traced to many kinds of sentencing laws—redefinition and enforcement of minor crimes that make it more likely to target certain populations and facilitate the huge numbers incarcerated—the entire effort is also strongly related to demands for cheap labor and flexible labor markets and the need to stigmatize groups to blame for economic failures.36

Mass incarceration serves as a means of social control. Its coordination with police, courts, and social welfare strategy functions within a larger process primarily targeted at people of color, tied to parallel surveillance and punishment mechanisms for those receiving government benefits. It coincides with the deterioration of under-resourced communities and the potential disruptions to an economic order, in which seemingly minor shifts in earnings and productivity can unravel financial stability, creating enormous risks for health and well-being.10

Linking criminal justice policy to social welfare policies has been part of a much broader agenda than punishment for crimes: It has become a method for maintaining control of large, already marginalized populations that may disrupt the economy and for distracting attention from broad economic and social processes that regulate the labor market and people made poor.37 It is also likely having profound effects on weakening democracy.52-55
The result has been the isolation, geographic dispersal, and stigmatization of groups now less able to organize politically and build power, limiting political equality. In turn, this has led to the creation of a sustained public health crisis for communities, determining the life chances of African American and Latino populations and people forced into poverty, along with their entire families.55-57 People returning from prison and jail require even greater opportunities for health and well-being than before their incarceration. Returning them to their previous conditions often means returning to the same life conditions that may have led to their incarceration.
