The Honorable Rosa L. DeLauro  
Chair  
Committee on Appropriations  
United States House of Representatives  
Washington, DC 20515

The Honorable Patrick Leahy  
Chair  
Committee on Appropriations  
United States Senate  
Washington, DC 20515

The Honorable Kay Granger  
Ranking Member  
Committee on Appropriations  
United States House of Representatives  
Washington, DC 20515

The Honorable Richard Shelby  
Vice Chairman  
Committee on Appropriations  
United States Senate  
Washington, DC 20515

Dear Chairwoman DeLauro, Chairman Leahy, Ranking Member Granger, and Vice Chairman Shelby:

The National Association of County and City Health Officials (NACCHO) is the voice of the nearly 3,000 local health departments across the nation. Local health departments continue to lead communities through the ongoing COVID-19 response, while also addressing exacerbated public health challenges, and responding to emerging issues, like the monkeypox virus outbreak.

NACCHO appreciates the supplemental funding Congress allocated in response to the COVID-19 pandemic. The infusion of emergency funds buoyed our underfunded public health system and enabled short-term surges in public health capacity. However, as a nation, we have chronically underinvested in public health, leaving our system underprepared to respond to daily challenges and emerging issues. Congress has the opportunity now to build on the investments made during the COVID-19 pandemic to set the nation on the path to a more sustainable public health system that is equipped to support federal public health priorities and effectively lead in their communities.

Therefore, NACCHO requests Congress provide the strongest possible investments in local public health in Fiscal Year 2023. As you work to finalize an appropriations package, we urge you to support the following programs at the highest proposed level from each of the House and Senate’s appropriations bills, and to include report language to exercise oversight to ensure federal funds are efficiently and equitably allocated to the local level.

**Centers for Disease Control and Prevention: $10.45 billion (House and Senate bills)**

The CDC has unmatched expertise and experience in tackling a broad array of public health issues including the ongoing COVID-19 pandemic and other pre-existing challenges that have been exacerbated by the pandemic like mental health, substance use, sexually transmitted infections, and chronic disease. CDC serves as the command center for the nation’s public health defense system against emerging and reemerging infectious diseases, man-made and natural disasters, and other public health emergencies. Strong funding is critical to supporting all of CDC’s activities and programs, which are essential to protect the health of our communities, and NACCHO requests **$10.45 billion for CDC** in FY2023. Due to years of underfunding, many CDC programs have not received the resources that are needed to address the
many health challenges we face as a nation, resulting in many of CDC’s most effective prevention programs not reaching all communities.

Additionally, federal funding from the CDC intended for both state and local health departments continues to have variable reach to local public health agencies. Ensuring these resources reach the local health department level in a timely way is critical to enabling communities to address public health needs. NACCHO requests that Congress include report language similar to that included in the explanatory statement accompanying Division H (L-HHS) of the FY2022 Consolidated Appropriations Act (H.R. 2471) encouraging CDC to require States to fund local health departments when programatically appropriate, and further urging CDC to publicly track and report to the Committees how funds provided to State health departments are passed through to local health departments, including amount, per grant award, by local jurisdiction, and date funds are made available to each local health department.

**Public Health Loan Repayment: $25 million (House bill)**
The public health workforce is the backbone of our nation’s governmental public health system, but was understaffed and overworked even before the pandemic. Local health departments have lost over 20% of workforce capacity since 2008, and over a third of local public health workers were projected to leave the field in the next five years due to retirement or to pursue opportunities in the private sector. Furthermore, at least 500 local and state health officials have reportedly left their positions during the pandemic due to politicization, harassment, termination, and burnout. Combined, these forces create an urgency to addressing our public health workforce crisis. A bipartisan, bicameral group has recognized this need and supported legislation (S. 3506 and H.R. 3297) that would authorize a public health workforce loan repayment program and give local, state, and Tribal health departments a vital tool to recruit and retain top talent. NACCHO urges the inclusion of $25 million to establish the public health loan repayment program at the Health Resources and Services Administration so that health departments can immediately bolster their efforts to strengthen the public health workforce.

**Public Health Infrastructure and Capacity: $750 million (House bill)**
Local health departments operate on limited and unpredictable budgets that do not allow for long-term investments in needed infrastructure and cross-cutting needs. Federal public health funding has traditionally followed a boom-and-bust cycle in response to crises. Additionally, funds are often limiting, for example tied to a specific disease state or programmatic function, which makes it difficult to invest in or sustain critical health department functions not tied to a specific disease state. Local health departments need sustainable, disease-agnostic, predictable funding to support local public health infrastructure, including data modernization and workforce development. Such funding would allow local health departments to focus on certain skillsets that are critically necessary – like communication, outreach, data analysis, and digitalization – but that they largely lack due to current funding constraints. The lack of this ability at the local level hinders efforts to support federal public health objectives.

NACCHO is grateful that Congress recognized this need and established a new Public Health Infrastructure and Capacity line within the CDC in FY2022, and NACCHO requests $750 million for this crucial program in FY2023. Importantly, funding to support cross-cutting core public health functions should supplement, not supplant the disease-specific funding that currently supports many critical health department activities. Indeed, new capabilities supported by disease-agnostic funding will ultimately enhance the functionality of existing programs. NACCHO appreciates both the House and Senate Committees inclusion of language encouraging CDC to urge state health departments to award...
funds to local health departments and to publicly track and report on the suballocation, and requests that this language be maintained in the final report.

Public Health Emergency Preparedness Cooperative Agreement: $740 million (Senate bill)
The PHEP Cooperative Agreement provides funding to 50 states, 4 large cities (Chicago, Los Angeles County, New York City, and Washington, D.C.), and eight territorial health departments to strengthen public health departments’ capacity and capability to effectively plan for, respond to, and recover from public health emergencies. NACCHO urges $740 million for PHEP in FY2023. Public health emergencies have increased in number and scope since the establishment of the PHEP program, and PHEP funding has not kept pace. Restoring funding to $1 billion is necessary to allow the program to comprehensively support local communities and states in their ability to prepare to respond to terrorist threats, infectious disease outbreaks, natural disasters, and biological, chemical, nuclear, and radiological emergencies, and other threats.

More than 55% of local health departments rely solely on federal funding for emergency preparedness. However, funding from state health departments to local health departments can have a varied approach and have reduced over time as overall federal appropriations fell. To ensure all communities have the resources they need to prepare for and respond to public health emergencies, NACCHO requests you maintain report language included in both the House and Senate bills to provide increased transparency around suballocations of PHEP funding from states to local health departments requesting a state distribution table in the fiscal year 2024 Congressional Budget Justification, showing how funding is being allocated to local health departments, how States are determining these allocations, and date funds are made available to each local health department.

Data Modernization Initiative: $250 million (House bill)
The local health department COVID-19 response was hampered by a historical lack of resources, outdated systems, and an overall underfunding of public health infrastructure. Public health needs a robust, modern, and secure public health information ecosystem capable of sustainment and surge that delivers real-time, accurate, and useful data to public health and policymakers at the local, state, and federal levels. Across the country, local and state public health departments operate a mismatched network of siloed public health information systems, most of which do not talk to each other nor to the health care delivery sector, and all of which are in urgent need of upgrade to prepare for and respond to public health challenges. To meet these challenges, NACCHO requests $250 million for the CDC’s Data Modernization Initiative and supports report language included in the Senate bill urging CDC to formally engage with partners including local health departments on development and implementation of public health data systems.

Epidemiology and Laboratory Capacity Awards
The ELC program provides annual funding, strategic direction, and technical assistance to domestic jurisdictions for core capacities in epidemiology, laboratory, and health information technology activities. In addition to strengthening core infectious disease capacities nationwide, this cooperative agreement also supports a myriad of specific infectious disease programs. Like other federal streams, funding through ELC grants has variable reach to the local level. NACCHO requests Congress urge CDC to work with states to prioritize funding to local health departments based on factors such as population size, disease burden, and other public health metrics to promote equitable funding distribution, and to publicly track and report how funds are passed through to local entities.
Medical Reserve Corps: $6.24 million (House and Senate bills)

The Medical Reserve Corps (MRC) is a national network of local-organized volunteers committed to improving the public health and resiliency of their communities. Two-thirds of the nation’s 800 MRC units are housed within local health departments. MRCs are deployed to address public health emergencies and have stepped up to serve their communities during the COVID-19 response – in FY2021, MRC units provided 2.7 million hours of service, compared to about 300,000 hours in FY2019 prior to the pandemic. Additionally, the number of volunteers across the MRC network has grown from roughly 175,000 at the beginning of 2020 to over 300,000. The total economic value of MRC volunteer contributions is estimated at over $91 million. NACCHO advocates for $6.24 million for MRC so that capacity built during COVID-19 can be sustained and at the ready for future public health emergency responses. NACCHO also requests the inclusion of language from the Senate bill that urges ASPR to continue the historical funding approach that provides funds directly to local MRC units.

NACCHO appreciates your consideration of these requests and looks forward to working with Congress to strengthen and support local public health. If you have any questions about these requests, please contact Adriane Casalotti, Chief of Government and Public Affairs, at acasalotti@naccho.org.

Sincerely,

Lori Tremmel Freeman, MBA
Chief Executive Officer
National Association of County and City Health Officials
