June 27, 2019

The Honorable Roy Blunt
Chairman
U.S. Senate
Appropriations Subcommittee on Labor, Health and Human Services, Education and Related Agencies
Washington, DC 20510

The Honorable Patty Murray
Ranking Member
U.S. Senate
Appropriations Subcommittee on Labor, Health and Human Services, Education and Related Agencies
Washington, DC 20510

Dear Chairman Blunt and Ranking Member Murray,

As you develop the Senate’s Labor, Health and Human Services, Education and Related Agencies appropriations legislation for fiscal year (FY) 2020, the 90 undersigned organizations representing patients and consumers, public health professionals, health information technology (IT) developers, health care providers, and scientists urge you to match the House’s FY 2020 appropriation of $100 million to the Centers for Disease Control and Prevention (CDC) for a new, multiyear initiative that will transform the public health surveillance enterprise and save lives. Specifically, this funding would allow CDC, state, local, tribal, and territorial health departments to move from sluggish, manual, paper-based data collection to seamless, automated IT systems and to recruit and retain skilled data scientists to use them. More, better, faster data yielded by secure, interoperable, integrated systems will allow public health professionals and policymakers to make better decisions and get ahead of chronic, emerging, and urgent threats.

“Public health surveillance” is the interactive system of government public health agencies at the federal, state, local, tribal, and territorial levels working with health care providers and the public at-large to detect, report, respond to, and prevent illness and death. Every day—often unbeknownst to most Americans—public health surveillance is saving lives by detecting and facilitating the response to health threats including E. coli contaminated lettuce, measles, antibiotic resistance, lead poisoning, influenza, health care associated infections, opioid overdoses, Zika, and many more.

Unfortunately, the nation’s public health data systems are antiquated, rely on obsolete surveillance methods, and are in dire need of security upgrades. Sluggish, manual processes—paper records, spreadsheets, faxes, and phone calls— are still in widespread use. Lack of interoperability, reporting consistency, and data standards leads to errors in quality, timeliness, and communication.

In addition, public health professionals are faced with rapid advances in data science and evolving cybersecurity threats, and many do not yet have the necessary 21st century skills to understand and securely integrate health data. The public health workforce of today and tomorrow must acquire new skills to understand and securely integrate health data and bolster and maintain cybersecurity. Developing a new generation of skilled public health data scientists will require new curricula, professional development, post-graduate fellowships, and on-the-job training.

The development of 21st century data systems and the public health workforce needed to operate and maintain these systems have been woefully underfunded to date. A robust, sustained commitment to transform today’s public health surveillance will ultimately improve Americans’ health. We understand that without a bipartisan budget agreement to avoid a scheduled $55 billion cut to nondefense discretionary programs, including those at CDC, this funding request will be difficult if not impossible to
achieve. We remain committed to supporting lawmakers as they negotiate a deal to raise the caps, prevent devastating cuts, and reinvest much needed funding in our nation’s public health infrastructure, including data systems and workforce. If you have questions, please contact Emily Holubowich at eholubowich@dc-crd.com.

Sincerely,
