Webcast 2.2

Who Might Benefit from PrEP? Individual-Level Assessments

PRESENTED BY:

MARK THRUN, MD
ASSOCIATE PROFESSOR, UNIVERSITY OF COLORADO, DIVISION OF INFECTIOUS DISEASES
DIRECTOR, HIV/STD PREVENTION AND CONTROL, DENVER PUBLIC HEALTH
DIRECTOR, DENVER PREVENTION TRAINING CENTER
Overview

• Sexual health discussions
• Understanding and assessing individual-level risk
• Risk-assessment tools
• The context for sexual health discussions: who does them?
• What do the PrEP guidelines say?
Case Study

Patient: 35-year-old gay HIV-negative barista

• In a long-term relationship with a 36-year-old man with HIV on ART; viral load repeatedly undetectable

• Asks, while pouring your venti latte with an extra shot, “How much do I need to worry about getting HIV?”

• His partner tells him that HIV transmission risk is low with an undetectable viral load

• Barista wonders if he needs to keep using condoms
Case Study

What would you recommend?

• Given his partner’s undetectable viral load, it is safe for them to stop using condoms?
  o He should support his partner in maintaining an undetectable viral load, as keeping it undetectable is likely the most important factor to him staying HIV-negative.
  o He should consider pre-exposure prophylaxis (PrEP).
  o They should wear a condom every time they have anal sex.
Population versus Individual Risk

Your jurisdiction’s population
Population versus Individual Risk

Your jurisdiction’s population

Population at high-risk for HIV
Population versus Individual Risk

Your jurisdiction’s population

Population at high-risk for HIV

Individuals at high-risk for HIV
Pulling it All Together

No need for PrEP

May benefit from PrEP

Offer PrEP
Engaging in Sexual Health Discussions

- Create and maintain an open, trusting, and confidential environment for discussion of sexual behaviors, as well as substance use.
- Build an ongoing dialogue with the patient regarding their risk behavior.
- Reinforce the fact that PrEP is not always effective in preventing HIV infection, particularly if used inconsistently, but that consistent use of PrEP – particularly when used together with other prevention methods – confers very high levels of protection.
Employ a Sexual Health Framework

- Sexual health is an element of overall health
- Place behaviors in the context of having a healthy sex life
- Frame messaging in a supportive light
  - Not “I am sorry that you have chlamydia.”
  - Rather “I am so glad you came in so we could take care of this for you.”
- Open the door for disclosure and ongoing dialogue
- Understand patient desires and goals
Sexual Health Topics to Discuss

• Sexual orientation and gender identity
• Relationship status and support systems
• Sexual risk behaviors and prior sexual history (including STDs)
• Prior use of post-exposure prophylaxis (PEP)
• Substance-using risk behaviors
• Behavioral health needs
Specific Topics to Cover

From the U.S. Public Health Service Clinical Practice Guidelines for PrEP

Example 3: Online Risk Calculator

- A decision-analytic model of PrEP for MSM.
- Tool available online at https://ictrweb.johnshopkins.edu/ictr/utility/prep.cfm.
- Population Cost-Effectiveness Calculator also developed and available at same web address.

HIV Pre-Exposure Prophylaxis (PrEP) Risk Assessment Tool: Individual Risk Calculator

1. What percent of the time do you use condoms when having anal sex, including both receptive (bottom) and insertive (top)?

2. What percent of the time are you the insertive partner (top) when having anal sex?

3. On average, how many times per month do you have anal sex?

4. Are you in a monogamous relationship with an HIV positive partner?
### HIV Pre-Exposure Prophylaxis (PrEP) Risk Assessment Tool: Individual Risk Calculator

1. What percent of the time do you use condoms when having anal sex, including both receptive (bottom) and insertive (top)?
   - 50%

2. What percent of the time are you the insertive partner (top) when having anal sex?
   - 50%

3. On average, how many times per month do you have anal sex?
   - 6 times

4. Are you in a monogamous relationship with an HIV positive partner?
   - Yes

4b. What is the HIV prevalence in your community? (click [here](#) for CDC estimates of HIV prevalence among MSM by metropolitan area, age, and race/ethnicity. If left blank, the national average of 19% will be used)
   - 16%

### Risk of acquiring HIV this year:

Legend:
- Brown: with condom
- Blue: without condom

Department of Health and Human Services, CDC, HIVMA, AAHIVM
Ask about STDs: HIV Incidence Increased Following Rectal Bacterial Infections in MSM

Ask about STDs: HIV Incidence Increased in MSM with Prior Syphilis

• Results from the iPrEx study of PrEP in MSM:
  o 2.8 cases of HIV per 100 person-years follow up for those with *no incident syphilis*
  o 8.0 cases of HIV per 100 person-years follow up for those with *incident syphilis*

• Hazard ratio of 2.6 for acquiring HIV for those with syphilis

Persons Presenting for PEP May Be Ideal Candidates for PrEP

PEP (taken for 28 days after initiation)
Discussions Should Take Into Consideration Context Provided by Local Prevalence Data

Who should facilitate sexual health discussions and/or educate about PrEP?

- Primary care provider or other medical provider
- Sexual health/STD clinician
- Family planning practitioner
- Health department clinical/educational outreach staff
- Disease intervention specialist
- Anyone else who interacts with persons at risk for HIV in the community
What do the US Public Health Service Clinical Practice Guidelines for PrEP say?
Assessing Risk in MSM

In the past 6 months:

- Have you had sex with men, women, or both?
- If men or both sexes, how many men have you had sex with?
- How many times did you have receptive anal sex (you were the bottom) with a man who was not wearing a condom?
- How many of your male sex partners were HIV-positive?
- If any positive, with these HIV-positive male partners, how many times did you have insertive anal sex (you were the top) without you wearing a condom?
- Have you used methamphetamines (such as crystal or speed)?
Assessing Risk in Heterosexual Men and Women

In the past 6 months:

• Have you had sex with men, women, or both?
• If opposite sex or both sexes, how many men/women have you had sex with?
• How many times did you have vaginal or anal sex when neither you nor your partner wore a condom?
• How many of your sex partners were HIV-positive?
• If any positive, with these HIV-positive partners, how many times did you have vaginal or anal sex without a condom?
Assessing Risk in Injection Drug Users

• Have you ever injected drugs that were not prescribed to you by a clinician?
• If yes, when did you last inject unprescribed drugs?
• In the past 6 months, have you injected by using needles, syringes, or other drug preparation equipment that had already been used by another person?
• In the past 6 months, have you been in a methadone or other medication-based drug treatment program?
Daily PrEP should be recommended for:

- Persons at high risk for HIV based on background incidence (> 2%) or
- Recent diagnosis of incident STIs, especially syphilis, gonorrhea, or chlamydia.
- Individuals who have used post-exposure prophylaxis (PEP) more than twice in the past year.
- People who inject drugs and who share injection equipment, inject 1 or more times a day, or inject cocaine or methamphetamines.

Marrazzo, J et al., JAMA, 2014
Conclusions

- Create the opportunity for open and honest risk discussions and disclosure
- Assess risk and potential PrEP benefit using objective measures, if possible
  - Risk scale (provider- or patient-implemented)
  - Prior PEP use
  - STDs: rectal bacterial infections or syphilis in MSM
- Place risk and potential use of PrEP in larger context of sexual health
- Consider local epidemiologic data (see webcast 2.1 for additional information, resources, and tools)
NACCHO’s Educational Series on PrEP and Local Health Departments

Module 1
PrEP for HIV Prevention: An Introduction
Beyond the Basics: The Science of PrEP
US Public Health Service Clinical Practice Guidelines for PrEP

Module 2
Who Might Benefit from PrEP: Individual-level Assessments

Module 3
Increasing PrEP Awareness and Knowledge in Your Jurisdiction
Incorporating PrEP into Comprehensive HIV Prevention Programs

NACCHO’s educational series about PrEP was supported by funding from Gilead Sciences, Inc.
PrEP Poses Many Questions

After watching the webcasts in Modules 1 and 2, join us for a live webinar discussion on

Friday, November 21, 2014 from 1:00-2:00 PM ET.

The webinar will be archived and made available via naccho.org.
